

36. The housing of claim **34**, wherein the cover sheet is configured to be positioned over a display positioned within the enclosure.

37. The housing of claim **34**, further comprising a brace coupling the lower housing structure to the upper housing structure.

38. The housing of claim **34**, wherein the lower housing structure comprises multiple braces coupling the lower housing structure to the upper housing structure, each brace defining a tab extending from the lower housing structure.

39. The housing of claim **38**, wherein:

the lower housing structure has:

a thickness;

a width greater than the thickness; and

a length greater than the width; and

the tabs extending from the lower housing structure are arranged along a line that is parallel to the length of the lower housing structure.

40. The housing of claim **34**, wherein at least one of the lower housing structure or the upper housing structure is formed from a metal material.
